Info

2 findings across 4 columns and 200 rows

Executive Summary

This dataset has 2 critical issues that could cause silent data loss or incorrect calculations. These should be resolved before the data is used for reporting or analysis.

Top Critical Findings

revenue_mixed (Type Inconsistency): However, 15 str values were found among 200 non-null values (the majority type covers 92.5%). Examples of unexpected values: 'N/A', 'N/A', 'N/A', and 2 more.

revenue_mixed (Sentinel Value): However, 7.5% of values (1 distinct sentinel string) are placeholder text rather than real data: 'N/A' (15 times).

Detailed Findings

Critical (2)

Critical	revenue_mixed	Type Inconsistency
Assumption	Column 'revenue_mixed' appears to be purely numeric.	
Reality	However, 15 str values were found among 200 non-null values (the majority type covers 92.5%). Examples of unexpected values: 'N/A', 'N/A', 'N/A', and 2 more.	
Impact	Rows with non-numeric values in 'revenue_mixed' will be silently dropped or converted to NaN during sums, averages, and other calculations, producing incorrect results without any error message.	
Recommended Fix	Review the non-numeric values in 'revenue_mixed' and decide whether they should be converted to numeric, replaced with a proper null, or moved to a separate column.	
Prevention Rule	Every value in 'revenue_mixed' should be the same type (numeric). Add a type-check validation rule at data entry or ingestion time.	

Critical	revenue_mixed	Sentinel Value
Assumption	Column 'revenue_mixed' appears to be a clean numeric column.	
Reality	However, 7.5% of values (1 distinct sentinel string) are placeholder text rather than real data: 'N/A' (15 times).	
Impact	Tools like pandas and Excel silently drop sentinel strings when computing sums or averages on 'revenue_mixed', making totals lower than expected. No error is raised, so the data loss goes unnoticed.	
Recommended Fix	Replace sentinel values in 'revenue_mixed' with proper null/blank cells so that downstream tools handle missing data correctly and row counts reflect reality.	
Prevention Rule	Never use placeholder text like 'N/A' in a numeric column. Use blank cells or a dedicated status column instead.	

Field Inventory

Summary of all fields with detected issues.

Field Name	Issue Types	Highest Severity	Finding Count
revenue_mixed	Sentinel Value, Type Inconsistency	Critical	2
